About

RECORDOID

social
dictaphone

Recordoid turns your phone into **social dictaphone**. Application interface simulates retro tape cassette recorder with all details and allows you to record voice notes in AMR or WAV format.

You can notify your friends about your new recording by sending message to social networks - Twitter or Facebook. You can share your recording with friends via E-Mail or MMS and set it as a ringtone.

You can easily add text note and GPS position to your recording and display the location on the map.

Additionally thanks to reverse geolocation engine, Recordoid is able to receive address data of the place where the recording was done.

Main View

To start recording just press **Record** button. At any time you can pause recording by pressing **Pause**. If you want to finish recording press **Stop** button and enter the name. To display list of all recordings press **Play** button. To close the application press **Eject** button.

to do on Monday

00:00:03 | 31 October 2010 11:47 | 00:00:06

- On the Player View you can play / pause / stop recording and using progressbar seek freely any position in the recording file
- To show recording location on the map press *Show On Map* button
- To send message to social services press *Facebook* or *Twitter* button
- To display Options View press *Options* button
- To add / edit text note to the recording press *Note* button
- To back to My Recordings View press *Close* button

Geolocation and reverse geolocation

Thanks to embedded GPS module in Bada phones you can add location data (longitude and latitude) as additional information for your recording.

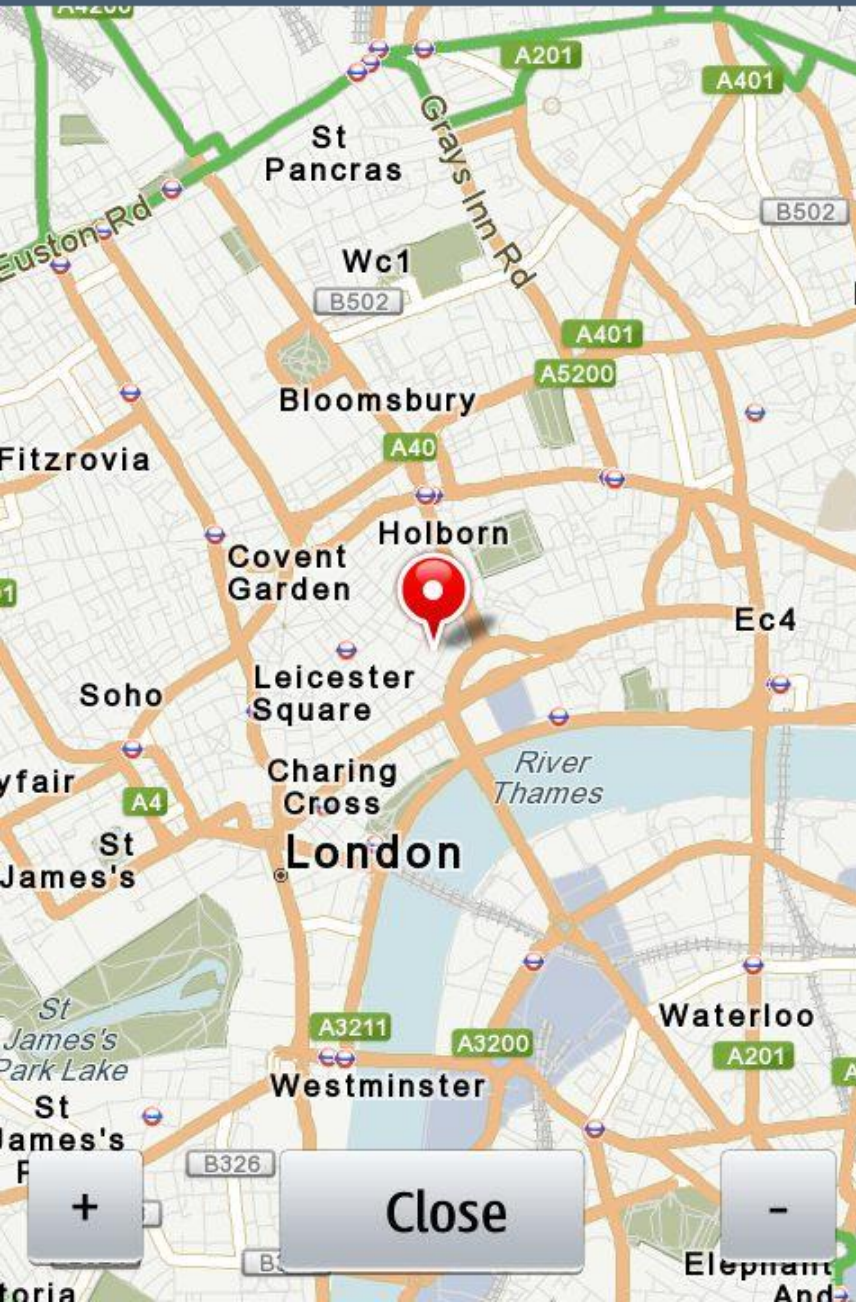

Moreover using reverse geolocation engine Recordoid is able to receive address data (city name, street etc.) of the place where the recording was done

Note: you must enable *Add Location* option in Recordoid settings

Note: Geolocation and reverse geolocation strongly depends on performance of GPS module and availability of GPS satellites

Map View

If you enable *Add Location* option in Recordoid settings you can see recording location (by pressing *Show On Map* button on the Player View) marked on the map. You can zoom in / out to see map details

Social Services

Using Recordoid you can easily send message to Facebook or Twitter (by pressing *Facebook* or *Twitter* button on the Player View) about your recording: name, date, duration and location information (if available)

Text Note View

You can add additional information to your recording as a text message. By default this duration and date / time of recording
